EXAMINER

DENNISON, JERRY B

ART UNIT PAPER NUMBER

2143

DATE MAILED: 05/19/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

**Office Action Summary**

Application No.

09/884,600

Applicant(s)

ANDERSON ET AL.

Examiner

J. Bret Dennison

Art Unit

2143

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 01 February 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-24 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-24 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

### DETAILED ACTION

1. This Action is in response to Amendment for Application Number 09/884,600 received on 01 February 2005.
2. Claims 1-24 are presented for examination.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 8-10, 15-17, and 22-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prust (U.S. Patent Number 6,714,968) in view of Hussey (U.S. 5,826,269).

3. Regarding claims 1, 8, 15, and 22, Prust disclosed a document retrieval method comprising:

receiving a request email message from a requesting device via a network, the request email message embodying a document request (Prust, col. 7, lines 25-30);

automatically generating a response email message with at least one document attached thereto in response to the document request (Prust, col. 7, lines 30-35); and

automatically transmitting the response email message to a destination address on the network (Prust, col. 7, lines 30-35).

However, Prust did not explicitly state determining from the request email address whether a destination address on the network to which at least one document specified in the document request is to be sent is a third party address or an originator address on the network, the originator address being associated with the requesting device; and

automatically generating a forwarding email message with the at least one document attached thereto in response to the document request if the at least one document specified in the document request is to be sent to the third party address, the forwarding email message being addressed to the third party address.

In an analogous art of email systems, Hussey disclosed an electronic interface for a network server in which clients send email requests and an email response builder generates a response email message, with an attached document, to be issued to the originator of the corresponding email address as well as any other "copied" email accounts originally designated in the "cc:" field (Hussey, col. 11, lines 55-67, col. 12, lines 1-10).

Both Prust and Hussey provide emailing systems where users request data. Hussey goes into further detail of the standard functions of the emailing systems.

Therefore it would have been obvious to one in the ordinary skill in the art at the time of the invention to incorporate the basic functionalities of an email system as taught in Hussey into Prust to provide users with a system that processes user requests for shared resources administered by the server (Hussey, col. 3, lines 30-40).

4. Regarding claims 2, 3, 9, 10, 16, 17, 23, and 24, Prust and Hussey disclosed the limitations, substantially as claimed, as described in claims 1, 8, 15, and 22, including parsing the request email message to identify the destination address and the at least one document requested (Prust, col. 7, lines 25-35, Prust teaches when a file is requested, the user indicates where to locate that file in the email, and the server uses this location information to find the file and send it).

Claims 4, 11, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prust in view of Hussey as applied to claims 1-3, 8-10, 15-17, and 22-24, and further in view of Beerman, Jr. et al. (U.S. Patent Number 6,084,952).

5. Regarding claims 4, 11, and 18, Prust discloses the limitations, substantially as claimed, as described in claims 1, 8, and 15, including determining if the requesting device is authorized to retrieve the at least one document (Prust, col. 1, line3 37-43). However, Prust does not explicitly state automatically generating an access denial email message in response to the request email message when the requesting device is not authorized to retrieve the at least one document. In an analogous art of communicating electronic messages between a remote device and a server, Beerman teaches an information processing subsystem which sends an email message to the unauthorized remote device user indicating authentication failure (Beerman, col. 9, lines 30-40). Therefore it would have been obvious to one in the ordinary skill in the art at the time of the invention to incorporate sending authentication failure emails to users trying to request files in order to notify users of not being authorized of retrieval of documents.

Claims 5, 12, and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prust in view of Cho. et al. (International Publication Number WO 01/33874).

6. Regarding claims 5, 12, and 19, Prust discloses the limitations, substantially as claimed, as described in claims 1, 8, and 15. However, Prust does not explicitly state receiving a request email message from a requesting device via a network, the request email message embodying a document request; automatically generating a response email message with at least one document attached thereto in response to the document request; and automatically transmitting the response email message to a destination address on the network. In an analogous art of remote file management, Cho discloses a file system directory structure viewing which makes it possible to view a directory listing of files belonging to the selected directory (Cho, page 7, lines 20-25). Cho also discloses the distribution manager transmitting files through email (Cho, page 6, lines 7-8). Prust and Cho are analogous because both inventions include remote file management where a user can access their stored files through email. Therefore it would have been obvious to one with ordinary skill in the art at the time of the invention to incorporate having access to directory listings to enable the user to choose from a list which file the user desires.

7. Regarding claims 6, 7, 13, 14, 20, and 21, Prust and Cho disclose the limitations, substantially as claimed, as described in claims 1, 5, 8, 12, 15, and 19. However, Prust

and Cho do not explicitly state determining whether the request email message is properly formatted; and transmitting an error message to the requesting device when the request email message is not properly formatted. In an analogous art of networking, Nielsen discloses an email response process where an email is generated to respond to any format errors found from parsing the email for parameters (Nielsen, col. 5 line 63 through col. 6, line 13). Therefore it would have been obvious to one in the ordinary skill in the art at the time of the invention to incorporate format error response system into the remote file and directory management system of Prust and Cho to provide the user with feedback in case of an error in the requesting email.

### ***Response to Amendment***

Applicant's arguments and amendments filed on 01 February 2005 have been carefully considered but they are not deemed fully persuasive. Applicant's arguments are deemed moot in view of the following new grounds of rejection as explained here below, necessitated by Applicant's substantial amendment (*i.e., by incorporating new limitations into the independent claims, which will require further search and consideration*) to the claims which significantly affected the scope thereof.

The claims as presented are not yet distinguished over the prior art. Examiner would like to point out an interpretation of the claims that should be taken into consideration when amending the claims.

The independent claims include nothing more than the basic functions of a web mail server. A user stores an email in his inbox at a web mail server, the email containing an attached document. The user of the web mail system can make an email request to forward this email to multiple recipients, including the user's own email address. The web mail server receives this email request, parses the email to identify all of the recipients, creates multiple emails with the document attached, and transmits each email to each recipient separately. A user simply forwarding an email to multiple addresses including the user's address satisfies the limitations of the claims. This functionality is well known and is used in standard emailing systems.

Applicant's arguments with respect to claims 1-24 have been fully considered but they are not persuasive. Applicant's arguments drawn toward distinction of the claimed invention and the prior art teachings on this point are not considered persuasive. It is also clear to the Examiner that Prust and Hussey clearly teach the independent claims of the Applicant's claimed invention.

Applicant's arguments with respect to claims 1-24 are deemed moot in view of the following new grounds of rejection, necessitated by Applicant's amendment to the claims, which significantly affected the scope thereof.

Furthermore, as it is Applicant's right to continue to claim as broadly as possible their invention, it is also the Examiner's right to continue to interpret the claim language as broadly as possible. It is the Examiner's position that the detailed functionality that allows for Applicant's invention to overcome the prior art used in the rejection, fails to differentiate in detail how these features are unique. As it is extremely well known in the

networking art as already shown by Hussey as well as other prior arts of records disclosed "requesting a document through email for multiple recipients" is taught as well as other claimed features of Applicant's invention. By the rejection above, the applicant must submit amendments to the claims in order to distinguish over the prior art use in the rejection that discloses different features of Applicant's claimed invention.

It is the Examiner's position that Applicant has not yet submitted claims drawn to limitations, which define the operation and apparatus of Applicant's disclosed invention in manner, which distinguishes over the prior art.

Failure for Applicant to significantly narrow definition/scope of the claims and supply arguments commensurate in scope with the claims implies the Applicant intends broad interpretation be given to the claims. The Examiner has interpreted the claims with scope parallel to the Applicant in the response and reiterates the need for the Applicant to more clearly and distinctly define the claimed invention.

### ***Conclusion***

**Examiner's Note:** Examiner has cited particular columns and line numbers in the references applied to the claims above for the convenience of the applicant. Although the specified citations are representative of the teachings of the art and are applied to specific limitations within the individual claim, other passages and figures may apply as well. It is respectfully requested from the applicant in preparing responses, to fully consider the references in entirety as potentially teaching all or part

Art Unit: 2143

of the claimed invention, as well as the context of the passage as taught by the prior art or disclosed by the Examiner.

In the case of amending the claimed invention, Applicant is respectfully requested to indicate the portion(s) of the specification which dictate(s) the structure relied on for proper interpretation and also to verify and ascertain the metes and bounds of the claimed invention.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to J. Bret Dennison whose telephone number is (571)272-3910. The examiner can normally be reached on M-F 8:30am-5pm.

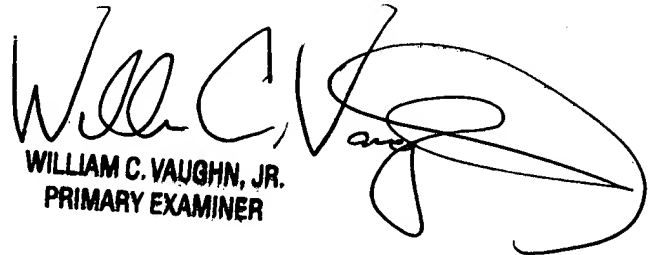

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A Wiley can be reached on (703)308-5221. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
